The present invention relates to novel plant transcription factors from Bucalyptus grandis or Pinus radiata. The present sequence is one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a plant having secala, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, basic

New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide.

WPI; 2000-579369/54.

                     The invention relates to a method of identifying an agent that increases nonsense suppression, by contacting modulator of translation termination (MTT1) also referred to as helicase B (HCSB) in Saccharomyces cerevisiae. The method is useful for identifying compositions or agents which increase nonsense suppression. The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae motif peptide

modulates the efficiency of translation termination composition the RNA helicase MTT1 with a composition or agent under conditions permitting binding between the MTT1 and the composition, detecting specific binding of the test composition or agent to the MTT1, and determining if the test composition or agent inhibits the MTT1. The composition and methods are useful for modulating the fidelity of translation termination or for identifying agents that: affect the functional activity of mRNAs by altering frameshift frequency, permit monitoring of a termination event, promote degradation

The agents, which may be antagonists or agonists, are useful in screening, diagnostic and therapeutic purposes, for diseases or conditions resulting from or cause premature translation, such as beta-thalassaemia, beta-globin, Duchenne/Becker Muscular Dystrophy, Haemophilia B, Haemophilia B, Von Willebrand Disease, obteogenesis Imperfecta, Breast cancer, Ovarian Cancer, Wilms Tumour, Hirschaprung disease, Cystic fibrosis, Kidney Stones, Pamilial hypercholesterolaemia, Retinitis Pigmentosa, or Neurofibromatosis, Retinoblastoma, ATM or Costmann Disease. The present sequence represents Retinoblastoma, ATM or Costmann Disease. The present sequence represents
The invention provides a new multiprotein complex which can modulate peptidyl transferase activity during translation. The complex comprises the gene encoding Helicase B (HCSB; renamed MTT1, for Modulator of Translation Termination) and the conserved proteins known to interact and carry out translation termination in eukaryotic cells, peptidyl eukaryotic release factor (eRF) 1 and eRF3. The complex can be used to modulate peptidyl transferase activity during translation in a cell. It can be administered therapeutically combined with a carrier in
                                                                                                                                                                                                  New multiprotein complex which can modulate peptidyl transferase activity during translation, useful to treat diseases associated with peptidyl transferase activity e.g. Duchene/Becker Muscular Dystrophy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Helicase B; HCSB; MTT1; modulator of translation termination; eRF1; eukaryotic release factor; peptidyl transferase; beta-thalassemia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   termination. Vectors comprising polynucleotides encoding the complex (or antisense sequences) can be constructed and introduced into cells to interfere with complex expression and so modulate the efficiency of translation termination of mRNA and/or degradation of aberrant transcripts in a cell. Agents binding to the complex can be identified and included in therapeutic compositions useful as above, and/or used to modulate peptidyl transferase activity during translation in cells. They are also useful to modulate the efficiency of translation termination of mRNA at a nonsense codon and/or promote degradation of aberrant transcripts in cells. The method can be used to identify agents/compositions modulating binding to MTT1, useful to identify genes. Sequences AAY7804-812 represent motifs I Tix comprised in the genes of interest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             pharmaceutical compositions to treat diseases associated with peptidyl transferase activity, especially diseases resulting from a nonsense or frameshift mutation e.g. beta-thalassemia, beta-globin, Duchene/Becker Muscular Dystrophy etc. It can be used to identify disease conditions involving a defect in the complex, by transfecting cells with encoding nucleic acid and determining the proportion of defective complex before and after transfection. It is also useful to screen for drugs involved i peptidyl transferase activity during translation, inhibiting the interaction, between MTT1 and eRF3 or involved in enhancing translation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination; seed oil yield; protein yield; carbohydrate;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant CC having an improved property comprises transforming a plant with the CC having an improved property comprises transformed plant, where the CC recombinant DNA construct and growing the transformed plant, where the polynucleotide or polypeptide is useful for improving plant properties. CC The recombinant DNA construct is useful for producing plants with CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of the mologous recombination, modified seed oil or protein yield and/or CC content, improved yield by modification of carbohydrate, nitrogen or CC content, improved plant growth and development under at least one stress providing improved plant growth and development under at least one stress condition, improved plant growth and development under at least one stress production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part form interpretation of protein patent did not form part form the grainted specification but was obtained in electronic condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a compromoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing a comprising the recombinant DNA construct and a method of producing the recombinant DNA construct and a method of producing the recombinant DNA construct and a method of producing the recombination and the recombination an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cold tolerance; heat tolerance; drought tolerance; herbicide; pathogen tolerance; pest tolerance; plant disease resistance;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

CC having an improved property comprises transforming a plant with the CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant properties. CC The recombinant DNA construct is useful for producing plant properties. CC improved plant properties, e.g. improved cold, heat or drought tolerance, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of CC content, improved yield by modification of carbohydrate, nitrogen or CC content, improved plant growth and development under at least one stress CC condition, improved plant growth and development under at least one stress CC condition, improved lignin production of photosynthesis or by CC production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not CC form part of the printed specification but was obtained in electronic CC format from USPFO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant having an improved property. The plant is a crop plant such as maire or soybean. The method of producing a transformed plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polyneptide from a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            capable of detecting 1000 or more genes from Drosphila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
New polynucleotides and polypeptides, useful for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; pharmaceutical; diagnostic; gene therapy; tissue regeneration; cell regeneration; membrane protein; signal transduction-related protein; transcription-related protein; osteoporosis; neurological disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       १
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention discloses a polymucleotide comprising a sequence selected CC from 1970 fully defined nucleotide sequences which encode novel CC polypeptides. Also claimed is a polypeptide encoded by the polymucleotide CC or its partial peptide, an antibody binding to the polypeptide or peptide CC of the polymucleotide, immunologically assaying the polypeptide or peptide CC with the antibody of the encoded protein, and observing the binding CC with the antibody of the encoded protein, and observing the binding CC expressible manner and an antisense polymucleotide. The oligonucleotide is useful as a primer for synthesising the polymucleotide, or as a probe CC is useful as a primer for synthesising the polymucleotide, or as a probe CC genes may be included in them, for developing a diagnostic marker or CC medicines for regulation of their expression and activity, or as targets of genes may be included in them, for developing a diagnostic marker or CC medicines for regulation of their expression and activity, or as targets of genes therapy. The genes are involved in tissue and/or cell cranscription-related proteins, disease-related proteins, and genes are involved in transduction-related proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 termination. Vectors comprising polynuclectides encoding the complex (or antisense sequences) can be constructed and introduced into cells to interfere with complex expression and so modulate the efficiency of translation termination of mRNA and/or degradation of aberrant transcripts in a cell. Agents binding to the complex can be identified and included in therapeutic compositions useful as above, and/or used to modulate peptidyl transferase activity during translation in cells. They are also useful to modulate the efficiency of translation termination of mRNA at a nonsense codon and/or promote degradation of aberrant transcripts in cells. The method can be used to identify agents/compositions modulating binding to MTTI, useful to identify genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       can be administered therapeutically combined with a carrier in pharmaceutical compositions to treat diseases associated with peptidyl transferase activity, especially diseases resulting from a nonsense or frameshift mutation e.g. beta-thalassemia, beta-globin, Duchene/Becker Muscular Dystrophy etc. It can be used to identify disease conditions involving a defect in the complex, by transfecting cells with encoding nucleic acid and determining the proportion of defective complex before and after transfection. It is also useful to screen for drugs involved in peptidyl transferase activity during translation, inhibiting the proportion of defection the complex before a peptidyl transferase activity during translation, inhibiting translation of the proportion of the complex before the complex before transferase activity during translation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              peptidyl transferase activity during translation. The complex comprises the gene encoding Helicase B (HCSB; renamed MTT1, for Modulator of Translation Termination) and the conserved proteins known to interact and carry out translation termination in eukaryotic cells, peptidyl eukaryotic release factor (eRF) 1 and eRF3. The complex can be used to modulate peptidyl transferase activity during translation in a cell. It

                                                             Identifying a test composition or agent that translation termination comprises contacting composition or agent, and determining if the inhibits the MTT1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      Frameshift frequency; aberrant transcript degradation; peptidyl transferase modulation; beat thalassaemia; beta-globin; puchenne/Becker Muscular Dystrophy; Haemophilia A; Haemophilia B; Von Willebrand Disease; Osteogenesis Imperfecta; Breast cancer; Von Willebrand Disease; Osteogenesis Imperfecta; Breast cancer; Ovarian Cancer; Wilms Tumour; Hirschsprung disease; Cystic fibrosis; Kidney Stone; Familial hypercholesterolaemia; Retinitis Pigmentosa; Nederly Stone; Familial hypercholesterolaemia; Retinitis Pigmentosa;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method of identifying an agent that increases nonsense suppression, by contacting modulator of translation termination (MTI) also referred to as helicase B (HCSB) in Saccharomyces cerevisiae. The method is useful for identifying compositions or agents which increase nonsense suppression. The invention may also be used for antiviral therapy and for suppression of pathological nonsense mutations. The present sequence is Saccharomyces cerevisiae DIP1 protein
                                                                                                                                                                                                                                                                   22-JUL-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            the RNA helicase MTI with a composition or agent under conditions germitting binding between the MTI and the composition, detecting epecific binding of the test composition or agent to the MTI. The composition and methods are useful for modulating the fidelity of translation and methods are useful for modulating the fidelity of translation artivity of mRNAs by altering frameshift frequency, permit composition of a termination event, promote degradation of aberrant transcripts, and provide modulators (inhibitors/stimulators) of peptidyl transferase activity during initiation, elongation, termination and mRNA cogradation of translation. The agents, which may be antagonists or agonists, are useful in screening, diagnostic and therapeutic purposes, composits, are useful in screening, diagnostic and therapeutic purposes, composits, meamophilia A, Haemophilia B, Von willebrand Disease, Composits Imperfects, Breast cancer, Ovarian Cancer, Wilms Tumour, Composits Imperfects, Breast cancer, Ovarian Cancer, Wilms Tumour, Composits Imperfects, Retinitis Pigmentosa, or Neurofibromatosis, compositions, AfM or Costmann Disease. The present sequence represents control amino acid sequence of the yeast helicase Dipl.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The present sequence represents a polypeptide, designated CHAMP (cardiac

The present sequence represents a polypeptide, designated CHAMP (cardiac helicase activated by MBF2 protein). The CHAMP protein contains seven conserved motifs bearing a striking resemblance to RNA helicases involved in RNA processing, and to enhancer binding factors involved in tissue transcription. CHAMP is expressed in cardiomyocytes from the linear tube stage to adulthood. The CHAMP polymucleotide is useful for enhancing cardiac function in a mammal. The CHAMP polypeptide and polymucleotide are particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particularly useful for increasing CHAMP activity in the heart or the particular than the particular t

The CHAMP protein contains seven conserved motifs bearing a striking resemblance to RNA helicases involved in RNA processing, and to enhancer binding factors involved in tissue transcription. CHAMP is expressed in cardiomyocytes from the linear tube stage to adulthood. The CHAMP polymucleotide is useful for enhancing cardiac function in a mammal. The CHAMP polypeptide and polymucleotide are particularly useful for increasing CHAMP polypeptide and polymucleotide are particularly useful for increasing CHAMP activity in the heart or heart cells of a subject, in order to treat, inhibit progression of or prevent myocardial infarction, heart failure or cardiac hypertrophy. This is also useful for increasing exercise tolerance, reducing hospitalization, improving quality of life, decreasing morbidity, or decreasing mortality in a subject with heart failure or cardiac
                                                                                                                                                                                                                                                                                                                                                                                                   New CHAMP (cardiac helicase activated by MEF2 protein) polypeptide and polynucleotide, useful for enhancing cardiac function for treating, inhibiting progression of or preventing myocardial infarction or heart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 517 AA;

                      The invention relates to a recombinant DNA construct comprising a promoter functional in a plant cell, where the promoter is positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source. The invention also relates to a transformed plant comprising the recombinant DNA construct and a method of producing a transformed plant thaving an improved property. The plant is a crop plant such as maize or soybean. The method of producing a transformed plant with the recombinant DNA construct and growing the transformed plant with the polynucleotide or polypeptide is useful for improving plant properties. The recombinant DNA construct is useful for improving plant properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cold tolerance; heat tolerance; drought tolerance; herbicide; osmosis; pathogen tolerance; pest tolerance; plant disease resistance; cell cycle pathway modification; plant growth regulator; homologous recombination, seed oil yield; protein yield; carbohydrate; nitrogen; phosphorus; photosynthesis; lignin; galactomannan; bacterial polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                    New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 prevent myocardial infarction, heart failure or cardiac hypertrophy. is also useful for inproving quality of life, decreasing morbidity, or decreasing mortality in a subject with heart failure or cardiac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2004-061375/06

tolerance to herbicides, extreme osmotic conditions, pathogens or pests, increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of homologous recombination, modified seed oil or protein yield and/or content, improved yield by modification of carbohydrate, nitrogen or phosphorus use and/or uptake, by modification of photosynthesis or by providing improved plant growth and development under at least one stress condition, improved lignin production or improved galactomannan production. This sequence represents a bacterial polypeptide used in the scope of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic
Sequence 683 AA;
                                                                                                                        format from USPTO at seqdata.uspto.gov/sequence.html.

marker or medicines as targets of gene t New polynucleotides and polypeptides, useful for developing a diagnostic marker or medicines for regulation of their expression and activity, or therapy.

N-PSDB;

2003-450961/43.

ADB63037.

Claim 1; Page; 222pp; English.

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding

```
cc between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesising the polynucleotide, or as a probe for detecting the polynucleotide. The polynucleotide and encoded composed the polynucleotide and encoded composed in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell composed therapy. The genes are involved in tissue and/or cell cregeneration. Membrane proteins, signal transduction-related proteins, composed to transcription-related proteins, disease-related proteins and genes concoding them can be used as indicators for diseases (e.g. osteoporosis, the activity or expression of the encoded protein to treat diseases. The sequence presented is a protein of the invention. Note: Some of the sequence data for this patent is not represented in the printed composed patent of the invention supplied by the
                                                                                                                                                                                                                                                                                                                                           Sequence 804 AA;
